Featured Article

Our raisins come from Fresno Cooperative Raisin Growers, Inc who has been serving California growers since 1948

Raisins are 'sifted' to sort by size. The Jumbo Golden Raisin is the raisin that stays on the top of the sifter and will average from 275 to 675 raisins per pound. This varies so significantly because of annual crop variations.

DrunkenRaisins are drawn off the top of the pile and are currently running approximately 350 raisins per pound (raw)

"Select" size raisins run 800 - 1200 raisins per pound and are the golden raisins you get in the grocery store.

The ideal temperature to store raisins for long term storage is 40-42 degrees and raisins shelf life will run 12-18 months.

It takes 9 to 11 days for the DrunkenRaisin to 'binge and sober-up' before he's ready to make house calls

After hearing about the anti-inflammatory values of the gin-soaked raisin and having arthritis in both of my hands, I started making and eating them myself. They worked and others who had eaten them also testified to having great results. Soon I was making them for friends and began to wonder why we could not just buy them ready made. Hence, the birth of DrunkenRaisins. I'd love to hear from you, click my signature below and send your comments, suggestions or whatever.
